

ON DEMAND MARKET DATA: CLEAN, SECURE, AND DEEP

It's easy to talk about utilizing market data to improve your business, but the mechanics of actually acquiring high quality, normalized, cleansed data in the format that you need has always been a significant challenge. Until now.

OneTick Cloud takes the headaches out of sourcing tick data. In addition to lowering your costs, it enables your IT people and analysts to focus on doing their real jobs — like backtesting trading algorithms, multi-factor model development, portfolio analysis, pre- and post-trade analysis, and TCA.

ROBUST PLATFORM — REDUCED COMPLEXITY

OneTick Cloud is built on our robust, feature-rich OneTick platform. OneTick makes building even the most complex queries simple — and the results come back in a flash thanks to our high performance architecture and infrastructure. In OneTick Cloud, this means you can grab just the data you want, based on your choices of exchanges, symbols, time periods, fields, and analytics. You can also choose whether to pull full depth of book or top of book for any interval you need, from milliseconds to end of day. OneTick Cloud instantly delivers customized calculations derived on the fly from your data selections.

The data you get from OneTick Cloud is cleansed and normalized —and you only pay for the data you download.

It's simply the most efficient way possible to obtain high quality data for your trading operations.

THE NEXT STEP IN TICK DATA ACCESS

- No servers, data licenses or network management
- On demand tick data —pay only for the data you need
- Flexible access model — pick the model that fits your specific requirements

IN DEPTH GLOBAL MARKETS DATA

- 10+ years of normalized tick data more than 120 global markets, with full market depth
- 45 years of end of day data for US equities

APPLICATIONS

- Backtesting
- Quant Research
- Model Development
- Portfolio Analysis
- Pre- and Post-Trade Analysis
- TCA

FLEXIBLE THREE TIER SERVICE OFFERING— PICK THE ONE THAT'S RIGHT FOR YOU

OneTick Cloud is a securely-hosted managed data and analytics service supporting global equities and futures tick history, reference data, and adjustment factors. It provides on-demand analytics for creating custom datasets using OneMarketData's market leading enterprise data management software.

Tier 1: A securely hosted OneTick database stores normalized, cleansed equities and futures tick data from over 120 market centers. Use our simple web interface to build and run custom queries to select specific subsets of data based on the market centers, symbols, and time periods you're interested in — you select the fields and values (OHLC, Bars, and so on) from trade data, quotes and order book depth. Access the data through our fully documented API or FTP. You only pay for the data you download.

Tier 2: Use the OneTick Query Builder via Microsoft RemoteApp to access to all the data available in our OneTick Cloud service.

Tier 3: Use your local instance of the OneTick Query Builder to access the OneTick Cloud content, and create complex queries and calculations that combine data from the cloud with your own locally-hosted data.

For all three tiers, you only pay for the data you download to your local systems.

ONE MARKETDATA

OneMarketData is a leading provider of software solutions for the financial industry. Our OneTick platform is a smarter data management solution to get you in the game faster.

OneTick is a comprehensive suite for time-series data management, real-time event processing and analytics to address the most demanding requirements. Equity, Futures and Options proprietary traders, hedge funds, asset managers and investment banks can leverage the built-in capabilities of OneTick for quantitative research, transaction cost analysis, surveillance and back-testing.

Built by Wall Street experts, the OneTick suite of products is an enterprise-wide tick data capture and storage solution offering analytical modeling tools, global history across equities and futures markets and reference data.
